Aarts Plastics

Get a better grip with Aarts Plastics new Rib caps for unipot range

Aarts Plastics will proudly exhibit at Empack Netherlands on April 1st and 2nd their new modified rib caps for their existing range of unipots. Modified ribs on the side of the cap will give the end-user a better grip.

The complete Aarts Plastics unipot range covers a line from 20ml up to 1250ml. These new rib caps will specially fit unipots from 20ml to 375ml.

Major improvements have been made on the caps:

The ribs on the side of the caps have been modified to ensure a better grip.

Partially ongoing ribs to the top the caps give a better grip with the palm of your hand.

An injection point on the side of the caps instead of on the top for a nicer finish.

An internal bore guarantees perfect closure and a more solid cap.

The whole range of pots find their applications in the food, pharmaceutical and cosmetic markets.

Aarts Plastics will welcome you at Empack in The Netherlands on the 1st & 2nd April. Booth B1047.
