Bormioli Rocco

Bormioli Rocco roll-ons, a technology that makes life simpler

The Plastics Division, which produces a vast range of plastic cosmetic packaging including bottles (PET, HDPE, LDPE and PP) and jars (PP, HDPE and PET), also proposes two deodorant roll-on models.

Practical for both customers and end consumers, Bormioli Rocco's roll-on dispensers are the result of sophisticated technology and ongoing research into new functional solutions.

The Plastics Division has even developed a new roll-on production system which speeds up manufacturing times and saves energy. Ball, housing and cap are assembled and mounted on the filled bottle in a single process.

Outstanding features

Available in two standard models, both with a capacity of 50 ml, Bormioli Rocco **deodorant roll-ons** can be produced in many colours. They can also be further enhanced using transparency and special effects such as heat decoration, silk screening and metallic coating, for effective customisation of your product.

These stylish products have all the hallmark quality, innovative features and visual appeal that are typical of Bormioli Rocco packaging.
