

Coster

Stand out with Coster's new aerosol actuators

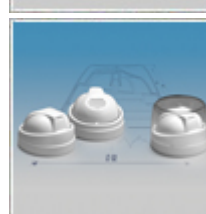

Coster presents at Packaging Innovations show in Birmingham two new efficient actuators: Crystal for sprays and Sfera for foams and gels. Crystal is realized in translucent, pleasant colours. Sfera is equipped with a protection overcap to avoid accidental actuation.

Coster is the market leader in the innovation, design and manufacture of aerosol and pump components for a variety of applications from personal care to industrial. Coster supplies leading blue chip companies as well as contract packers and has a dispensing solution for any product, even for new application fields. With patented Bag-On-Valve technology, Coster can supply a system for the growing shave gel and shower gel markets, complemented with a variety of aesthetically pleasing actuators.

Constant innovation and customers' participation in designing new and cutting edge aerosol actuators and spray caps allows Coster to provide its customers with exactly what they want. In a world where shelf presence is so relevant, customers need something that stands out in a crowd - and Coster delivers on this requirement. As well as its huge range of off-the-shelf actuators and spray caps, Coster works in partnership with its customers to design bespoke solutions to really make product's stand-out and something really special to finish the overall pack.

Alongside aerosol products, the sister line of pumps is equally important. Coster can supply anything from a standard hand soap actuator to a high-end perfumery pump where quality and that added experience cannot be compromised.

Visit Coster on stand 262 at Packaging Innovations where you are guaranteed a warm welcome and where you can discuss the company's range further.

take your products to the next level.
