Metalicoplastico

Series 66, a jar for any occasion by Metalicoplastico

These jars are a square design suitable for any cosmetic or beauty products. They come in 50ml capacity and with a 3 part cap that gives you several decoration possibilities.

The cap is divided into one exterior layer, the inside layer and the screw area layer, so you can apply a different effect or colours on each layer.

On the main photo you can see an assortment of decoration ideas. For example, hot-foiling the logo on the second layer whilst keeping the first layer transparent to create an elegant effect at the same time the logo is protected from any external scratches. You can also apply a soft touch, frosted, metalizing or any special effect on the layers. The jar is made in acrylic with a square shape perfect to transmit high quality to the buyer.

Combining the different parts of the jar and closure you will get a unique packaging with which you can target your desired audience. The range of colours also allows you to choose specific colour combination for your target markets. For instance, to present a line for men's products you can use austere colours as in the second photo and for a women's product you can use happier colours.

Their company's standard product range can offer a complete packaging solution for different cosmetic products with an unrivalled assortment of models and capacities, including luxurious acrylic transparent jars, cosmetic cream plastic jars with/without double wall, bottles, make-up cases, spatulas, mascaras and professional jars (500 and 1000ml), all available in a wide variety of shapes and sizes.
