## MMC Packaging Equipment

In a market that is constantly searching for innovative caps, MMC Packaging has the automation solutions you are looking for. The experienced engineering team designs reliable and durable machines that can withstand the harshest conditions. Throughout the lifecycle of the equipment, MMC Customer Service is always on hand to assist and offer services that will continuously enhance the efficiency of the equipment.

### Cap lining machines (Wadding machines)

Cap lining machines stamp out lining material disks from rolls of material and install the disks into caps at rates up to 1,200 caps/minute, depending upon cap size and design.

Various tooling available in order to cut and install various types of disk configurations:

Round, tri-tab, pull-tab, donut, double liner and oval.

Another option that can replace the traditional punch and die cutting method is the Rotary Die Module. The RDM pre-cuts the disks in the web of the material outside the lining machine. The web is automatically advanced into the lining machine to the appropriate location so that the liner insertion tools can push the disks out of the web and install them into the closures.

### Cap slitting and band folding machines

The Cap Slitting machine scores the sidewall of plastic closures and leaves a predetermined

### Assembly machines

This machine assembles two-piece caps or three-piece caps such as

Child Resistant Closures

Sports Caps

Hinged dispensing closures for Condiments/Antacids

Various style Multi-piece beverage caps

Vision Inspection Systems

The MMC Vision system is specifically designed for closure manufacturers in order to detect defects such as missing liners, partial cuts, off-centers, surface defects, pulp and foil separation, broken or missing tamper band, ovality, character recognition and foreign debris. The Vision system can be easily integrated to any automation equipment.

### Customer service

MMC Customer Service enhances the performance and longevity of your machine thanks to its broad spectrum

Closing machines

The Closing machine is capable of closing a variety of caps with various hinge styles and latching features such as

Flip-top closures for condiments

Dispensing closures for the hair care market

Rectangular coffee closures

Single-door and twin-door closures for spices and grated cheese

Beverage closures

Custom designed hinged closures

manufacturer

Updates on upgrades

Field service technician to perform the following work:

Start-up

Inspection

Maintenance

Training Services
