Jetty II - New one-piece vertical spray cap has a lot to offer

Plasticum introduces a proprietary one-piece vertical spray cap for air fresheners, the Jetty II. It is the successor of the Jetty I spray through cap that has been successfully delivered all over Europe for many years.

The key advantage of this new spray cap is the elimination of the button with insert, which are now fully integrated in one single shot moulding, thereby cutting out the post assembly operations. This provides a significant cost-reduction for packer-fillers, making the cap a very competitive alternative.

In addition, this new cap with its soft and contemporary shape has an attractive appeal which makes it stand out on the shelves. Jetty II is available in a 52 mm version, the regular size for today's air fresheners.
