INNOVATIVE PACKAGING SOLUTIONS

Plasticum

Plasticum offer exceptional pump systems

Plasticum offers different standard pump systems for a variety of applications such as personal care, veterinary, household, automotive and horticulture.

Accurate dosing and consumer convenience are the key features of these pump systems. You can count on Plasticum[™]'s experience in spray technology, they not only offer the products but also the knowledge behind.

Spray Pumps

This new patented spray system has exceptional spray characteristics: it will not jet or spurt. It also produces a highly symmetrical particle size distribution with smooth round patterns and presents a greatly reduced output of large spray particles.

Applications are found in personal care, food and household. The pumps are suitable for glass and plastic bottles, but also for aluminium cans. The smooth actuation provides enhanced consumer convenience. The products are eco-friendly through the lower material content. Nominal dose size is 100, 130 or 190 mcl.

Trigger Sprays

The user-friendly and comfortable trigger Sprayers are for use with a wide variety of domestic, chemical and pharmaceutical products. Main uses are veterinary, household, automotive and horticulture. The nominal output is 1.75 ml. The standard nozzle offers variation from a wide angle fine spray to a direct jet. The nozzle and the trigger can be locked. Amongst the different closure sizes and types there is a child friendly closure available. The trigger sprayers can also be fitted with a bell nozzle.
