## Spray cap Oscar (52 mm) with Insertless Spray Technology

Plasticum have launched their new Oscar, a one-piece spray cap with the Insertless Spray technology. Several customers and brands have already adopted this cap for their deodorants, anti-perspirants, body sprays and hairsprays. As the product is made up of just one part it can be recycled as one part.

Oscar has a diameter of 52 mm and fits on necked-in tinplate cans and on aluminium transfer cans. The polypropylene product does not require an over cap and is supplied with a matt finish. Plasticum plans to market a gloss version later this year. Oscar is suitable for several product applications and market segments.

This spray cap is a one-piece product, manufactured in one single moulding shot. No assembly of a separate insert is required. This also means that the product consists of just one material and that it can be recycled as one part. The cost-effectiveness and spray performance make Oscar an especially popular solution.

Oscar is fitted with the Insertless Spray technology, a proprietary spray solution with a patented technique, integrating both the actuator and insert. The spray orifice of the button is positioned just above the stem to optimise the control and performance when activating the aerosol. A special chamber and channel design stimulate the acceleration of particles into a swirling pattern.
