Plasticum

More customers change over to Plasticum's spray cap Oscar with IS technology

Earlier this year Plasticum Group launched Oscar, a one-piece spray cap with the Insertless Spray technology. Oscar has been developed in close co-operation with some leading players in the aerosol industry, who have already adopted this cap for their deodorants, anti-perspirants, body sprays and hairsprays.

Oscar has a diameter of 52 mm and fits on necked-in tinplate cans and on aluminium transfer cans. The polypropylene product does not require an over cap and is supplied with a matt finish. Oscar is suitable for several product applications and market segments.

This spray cap is a one-piece product, manufactured in one single moulding shot. No assembly of a separate insert is required. This also means that the product consists of just one material and that it can be recycled as one part. Especially the cost-effectiveness and spray performance make Oscar a popular solution.

Oscar is fitted with the Insertless Spray technology, a proprietary spray solution with a patented technique, integrating both the actuator and insert. The spray orifice of the button is positioned just above the stem to optimise the control and performance when activating the aerosol. A special chamber and channel design stimulate the acceleration of particles into a swirling pattern.

Plasticum Group is an innovative European manufacturer of high-quality injection moulded plastic packaging products. Plasticum designs, develops and manufactures aerosol (spray) caps & actuators, dispensing closures, shaped dispensing tubes, nutrition packaging and wet wipes packaging. Customers are active in the Personal Care, Food and Home Care markets. Plasticum Group companies are located in Germany, the UK and the Netherlands with a
