SR Packaging

SR provide stronger pressure sprayer

SR's upgraded jet actuator has a stronger pressure making it more user-friendly. The high pressured stream is able to ensure that the product is sprayed directly on the surface of scalp as opposed to over the hair as well.

This new development ensures that your product works more effectively hitting directly the area where it is required.

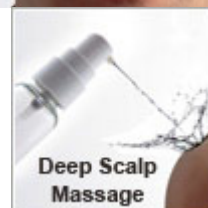

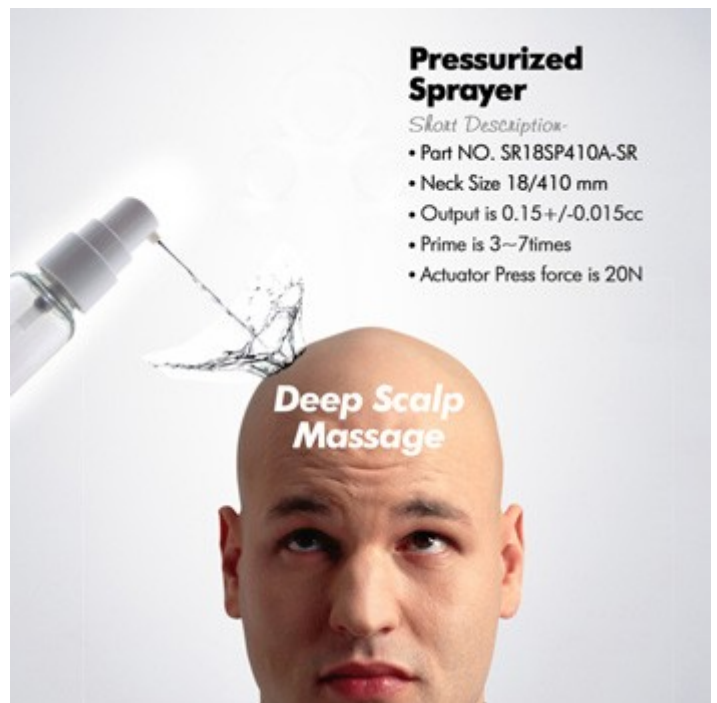

In recent years, it has been reported that more and more people are experiencing premature hair loss. This container for scalp solutions emerges at just the right time.

We often treat our facial skin with products to prevent the effects of aging. In much the same way, the scalp must be treated properly to maintain a healthy scalp environment and keep hair healthy-looking and strong.

Of course it is also available in brilliant colors and with the most beautiful, high-class effects which can be achieved by colorant, secondary processing including lacquering and metallization or aluminum ferrule. Just tell them the way you want it and they will put it into practice for you.

The jet sprayer's specifications are as below:

Output is 0.15+/-0.015cc
Prime is 3~7 times
Actuator Press force is 20N
