New and innovative "AND" caps for jars by Stakplast

Stakplast has launched its new, cutting edge 'AND' double caps, uniquely designed to fit Stakplast's jars. The double cap feature makes it a multi-functional new closure.

The 'AND' caps are available in two diameters 59mm and 69mm. The larger size fits most of their 50cc jars (TR-50 / SA50) and the smaller size fits their corresponding 30ml jars (TR30 / SA30).

Stakplast can now offer their customers the TR30/50 jar and SA30/50 jar with a completely new and impressive look. The presentation of these jars is particularly remarkable as the external edge of the 'AND' cap aligns perfectly with that of the jar, making one clean and smooth edge without any uneven edges or shoulders, leaving the jar with a sleek and undisturbed exterior surface.

The 'AND' caps comprise of two parts, the inner part is made in/of PP and the external part is made in/of SAN. Each of the parts can be colored in accordance with the customer's requirements for beautiful color combinations to match jar color or printing/label colors.

Additional exciting features are the decoration possibilities – there are options to print or hot stamp on both the external and the internal parts of the cap.
