Automatic acid etching by STO - standard rollette reaps regular orders

STO-Flaconnage is happy to announce their new capability to offer acid etching decoration that will provide your products with a high quality finish at a very competitive price.

As part of an ongoing investment programme to increase their decoration capacities, STO-Flaconnage have installed an automatic acid etching machine. This new decoration facility for glass containers adds to STO's automatic ceramic, organic spraying and printing, and gold blocking options already offered.

An early candidate for the automatic acid etching was STO's standard 10ml Rollette, a highly regarded bottle in the industry, manufactured by STO on a regular basis with delivery available ex-works in full pallet quantities. The roller-ball and housing are available on request and the cylindrical anodised aluminium caps can be offered in a range of Saco's standard colours with either a satin or bright finish.

Acid etching can add high impact and provide the perfect decorative finish to any glass packaging.

STO-Flaconnage of Knottingley, West Yorkshire, are part of the international Stölzle Glass Group, with headquarters in Köflach, Austria, and provide both custom design and standard bottles.

For full details of all STO bottles please click on the link below or visit their new sparkling website at: website: www.stoelzle.com.
