TKK releases new acrylic bottles with silicone/glass droppers

Acrylic is a material that provides a lot of benefits to the packaging buyer - durability, lightness, product compatibility, and (of course) price. TKK, as one of Asia's leading suppliers in acrylic products, has developed their existing offering to include a wide range of solutions for just about every conceivable product line that may require the particular properties the material can offer. In order to appeal to an even wider demand, the company has just released some interesting new complements for its bottle lines, not least of which is its new droppers.

The droppers are composed of a sterile glass tube paired with a silicone bulb for small liquid doses that may require accurate dosing, such as cosmetic sera, herbal remedies or pharmaceutical products. Droppers are swiftly becoming the product of choice among vendors that require the consistency that only droppers can provide, without getting too "high-tech" or overly complicated.
