- 17 How to inflate our bags

Recyclable

01 AirPack Systems – The Company

We are Europe's original multi-chamber inflatable packaging distributor. We have been selling our inflatable packaging for over 7 years and believe we now have the widest standard range in Europe. We're not just a general packaging distributor, we are totally focused on our inflatables range which is constantly being expanded and updated.

Our bags are manufactured to the highest quality and offer maximum protection for fragile items.

Below are the key benefits of using our bags:

- All bags come flat until inflated so can save up to 90% of your storage space
- All bags are 100% recyclable
- Our bags reduce damages and returns
- They can speed up your packing processes
- Very quick and easy to use
- No expensive start-up costs or machinery required, just a small air compressor or air line
- Using the finest co extruded plastic

AirPack Systems keep most standard bags in stock, holding 1,000,000 bags within our European warehouses.

Next day delivery is therefore possible on most orders. Bespoke bags can be made to order, subject to minimum order quantities. Our factory based in Asia was founded in 2003 and utilises the latest technology in machinery to produce the best quality bags available. They also comply with ISO9001/ ISO14000 standards. We have an excellent working relationship with our factory and this enables us to get samples and products over to the UK quickly and to the customer's exact specification.

02 AirPack Systems – Packaging Award

WINNER
OF EXCELLENCE IN
TRANSIT CATEGORY

AirPack Systems wins Starpack Award of excellence for Packaging in Transit category!

This is our first packaging award and we are very proud to have come first in a very tough category! Asda were sending out mirrors online but most were getting damaged on their way to customers. It became so bad that most were taken offline. AirPack Systems worked closely with Asda to design and develop inflatable end cap style bags to fully protect the mirrors. Since these have been introduced damages and returns are down to zero.

Transit – packaging designed to ship a product from one place to another. Incorporating Business to Business and Business to Consumer – Industrial (heavy duty), distribution packaging, direct to front door, internet sales.

Judges' Comments

“ Simple and effective with minimal materials. Functional protective packaging, which worked on drop test. Great protection. ”

- 6-8 week lead time for bespoke bags from order

Bespoke paint tin bag
1, 2.5 and 5 litre bags available

17 AirPack Systems – How to Inflate our Bags

1

INSERT

2

INFLATE

3

PACK & POST

To inflate AirPack Systems bags you will need an airline already installed with a regulator or an air compressor. We can supply two types of compressor:

Small Air Compressor

- 3.5 litre tank
- Dimensions 37cm x 13.5cm x 31.5cm
- Easy to use – low maintenance

Large Air Compressor

- 6 litre tank
- Dimensions 55cm x 20.5cm x 51cm
- Easy to use – low maintenance

Both compressors come with free foot pedal and nozzle attachment. They are very quiet units and inflate the bags in seconds.

Our compressors are supplied with the pressure gauge already pre-set but recommended pressure for inflation is 15-20 PSI.

To help make it easier to inflate our bags we fit a small green nozzle to every bag (except small phone bag and toner bags) which means no fiddling or looking for an inflation hole.

37cm x 13.5cm x 31.5cm

55cm x 20.5cm x 51cm
