

# Nemera

## Novelia®

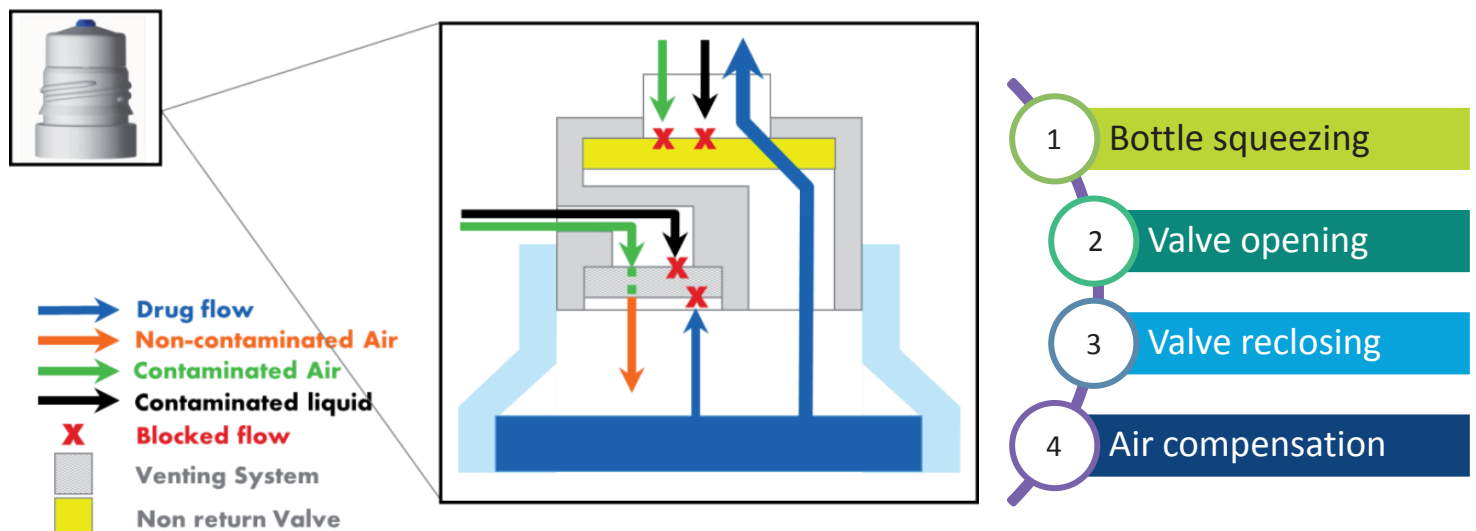

**Multi-dose closing tip system avoids the need for preservatives in the drug and prevents bacterial contamination over the duration of treatment.**

### Key benefits of Novelia® :

- **Preservative-free** to respect the ocular surface
- **100% controlled and safe** thanks to its patented **PureFlow™ Technology**
  - No contamination can enter into the product and the content of the bottle remains sterile during the duration of treatment.
  - Integrity of the system is tested at 100% during our production process
  - Numerous microbiological challenge tests have been designed and conducted to prove its efficacy **up to 90 days after opening**
- **Blue tip** for a better precision when targeting the eye
- User-friendly and intuitive, **as easy to use as any standard eyedropper**
- **Calibrated drops**, precise dose for a better adherence to the medication
- **One drop at a time** into the patient's eye

### Functioning of the Novelia® system:

# Nemera

## Novelia<sup>®</sup>

### Key advantages of preservative-free multi-dose versus unit-dose:

- **Easier to carry** a few eye droppers than several boxes of unit-doses, **less bulky**
- **More affordable** for the patients
  - A preservative-free multi-dose is a cost-effective solution compared to unit-dose for a regular posology/treatment
- **More sustainable**, no waste, can be used until the very last drop
  - A multi-dose uses around 8 times less plastic, 25 times less drug and 9 times less energy for transportation, than single-doses for a 1-month treatment (1 drop per eye twice a day).

Patients already use Novelia<sup>®</sup> on **4 continents**, with **Drug Products** as well as **Medical Devices**.

As of today, Novelia<sup>®</sup> is **the only preservative-free multidose system commercialized on the US market**.

**With Novelia<sup>®</sup>,  
preserve patients' eyes,  
not drugs!**

we put  
**patients  
First**
