Marking Module - MAM

The selection of modular tool options for G3 now includes a marking module that accommodates a variety of drawing, plotting, and marking tools.
Adding still more versatility, a module specifically designed for drawing and marking is now available for G3. Typical applications include plotting die-lines with ink on Mylar, marking seams on leather with washable silver pens, and identifying various parts or patterns with ballpoint pen.

The marking module accommodates the complete range of Zünd drawing/plotting inserts, and if needed, a 20 mm-diameter insert is available as well. The tool is pneumatically controlled for maximum efficiency. The marking module is hot-swappable and can be added to or removed from the G3 tool carriage within seconds.

It is available in two versions: a marking module single, or marking module double (the single tool can hold one drawing tool at a time, the double can hold two).

Marking Module Single - MAM-S

Marking Module Double - MAM-D

Fully equipped module carrier with 2 UM, ICC Camera and MAM-D.

Details
Suitable for Ø 15 mm and Ø 20 mm drawing/plotting tools.
Firmware vers. 1.42 or newer.
Stroke 20 mm.
Compatible with **G3**.

Advantages at a glance
Accommodates complete range of Zünd drawing/plotting tools.
Efficient execution of drawing/plotting functions.
Simple tool handling (hot-plug capability).
Easily upgradeable on all G3 cutting systems.
