

Workstation

The ergonomic workstation is ideal for operating your Zünd cutter; it also offers built-in holders, slots, and drawer space for securely storing modules, tools, and small parts.

The ergonomically designed G3 and S3 workstations are a perfect fit for the Zünd digital cutting workflow. Mouse and keyboard are prominently and conveniently positioned, making them easy to use. Holders for modules and tools are placed so they are always within arm's reach. The height of the monitor can be adjusted to meet individual needs.

The **G3** workstation is attached to the cutter control panel. It can accommodate two modules, 4 tools, and a keyboard. The PC is installed in the base of the console, where it is protected against dust and physical impact. In addition, the workstation provides a surface to operate the mouse and a drawer for storing various small items.

For **S3** cutters, the workstation is a separate entity mounted directly to the machine. Holders are available for one module and two tools. The PC stand at the base of the workstation is large enough for all commonly used CPUs.
