

Medicine

Our continuous dedication to higher technology, a higher quality of products, market trends and business opportunities led us to invest in clean room production.

We established a clean room production for medicine and pharmacy, which has been classified as class 8 and has certificate ISO 14644.

On 740m², there are seven new fully electric machines with a clamping force from 50 to 380 tones, equipped with linear robots, specially produced for the clean room.

These electric machines enable the reduction of the amount of electricity used as well as minimizing the emission of heat and dust.

The construction of the clean room was achieved with the highest level of quality.

We develop and produce top quality products, based on plastics, which are tailored to individual customer needs.

The products have been produced for globally oriented pharmacy and medicine companies.
