

# Albéa Néa technology chosen by the **UNCOVER SKINCARE** brand

January 2016 – **UNCOVER SKINCARE**, a Dutch skincare brand, chose the Albéa Néa technology platform to protect its sensitive formulas.

UNCOVER SKINCARE is a Dutch Skincare brand created by the Cosmetic Dermatology Clinical Research Physician Dr. Jetske Ultee. Offering skin diagnostic and beauty routine kits, the brand is focused on educating the consumer to take care of their skin.

**Selected by the brand, The Néa technology platform (Atmospheric & Airless)** is designed to protect today's most sensitive and fragile formulations.

This technology ensures perfect neutrality with respect to the formula. With a glass ball inside the engine and a spring outside the dosage chamber, the formula never comes into contact with metal. This engine also protects formulas from discoloration and incompatibility. For even more protection, it is available with a self-sealing actuator to prevent the formula from drying out. The Néa pump operates smoothly and the high suction rate can dispense even the most viscous products such as sunscreen, exfoliants, and makeup.

UNCOVER SKINCARE chose for its SAMPLES KIT, a **Mini Néa collection** to offer its consumers a beauty routine step by step. With refined white and pastel colors, the **Mini Néa** collection provides a cleanser, a toner, an exfoliant, a moisturizer and even sunscreen, all with the same harmonious packaging solution.

**Mini Néa** is the industry standard for neutral mini pumps in your travel size skincare products. This product is ideal for promotional offers, travel kits, and a range of premium products, targeted treatments or cures. It provides the perfect consumer appeal!

Albéa also manufactures several UNCOVER SKINCARE retail products. The brand chose to put the Néa engine inside the **Albéa Airless pack Ø32mm, 50ml with actuator and protective insert** for facial sun care, exfoliating and moisturizing products.

**Albéa new Protective Insert** uses a self-sealing technology that protects the formula from drying and allows formulas of any viscosity to be applied homogeneously. This insert prevents leakage and waste and ensures the formula is optimally preserved between applications. The standard range is also available with Monobloc actuators like Modern (aesthetic timeless shape) and Soprano (rounded feminine design).

The Néa platform brings differentiation to the shelf with elegant and modern pump designs made possible by **Albéa's high customization and decoration capabilities**. Customize the collar, actuator and cap on request or choose from our broad decoration which includes silk screening, hot stamping, vacuum metallizing, and offset varnishing. The UNCOVER SKINCARE range bottles are matte varnished with hot foil and silk finishes.

Albéa showcases again its capacity to support regional customers and develop their brands with innovation, quality and flexibility.
