# Capp Plast

*A company in the forefront for quality, technology, experience.*

Established at the end of the 50's, CAPP-PLAST is one of the most important and dynamic national companies active in the field of plastic material processing and manufacturing of big containers and pallets.

Its production of 700.000 containers yearly places it in a leading position on national and foreign markets.

Its entrepreneurial structure, along with its technical know-how, has always proved to be able to anticipate new productive needs emerging both in industry and agriculture, offering its clients innovative solutions in the field of goods handling, storage and conservation. Its real-time responses to every kind of demand for rationalisation and optimisation of logistic systems ensure a synergical relation to the customer and guarantee to him great satisfaction through cost improvement.

Its flexibility, efficiency, use of raw materials studied by its own Research & Development sector, its ideas, service, create that added value that makes Capp Plast the ideal partner to which to turn to for solving Your logistical problems.

## Capp Plast Quality

*Guaranteed, certified Quality*

In the history of Capp Plast, attention to quality has always played a fundamental role of primary importance. A vocation that is perfecting with the certification according to the UNI EN ISO 9001-2000 standard.

A result that proves the quality of the final products and attests the functionality of the company organisation. An additional guarantee value to full advantage of its customers.

Reg. n. 468-A  
UNI EN ISO 9001-2000

## Capp Plast and the environment

*Technology and recyclable materials*

The Capp Plast containers and pallets are manufactured with the best plastic materials in full respect of the environment: each product has been studied to remain unaltered in time, to maintain its own quality characteristics but, above all, to be completely recycled.

A firm point in the company philosophy, underlined with a pinch of pride, lies in fact in a declaredly ecological productive viewpoint.

Industry/agriculture

## Smartbox

*The intelligent, reliable and affordable answer to the logistics and space problems in the agro-food and industrial sectors.*

### **Optimized logistics and storage.**

From 54% to 66% of spared space. Folding the container's sides spares space during storage and transportation of empty bins, reducing the volume by a factor 1:2 to 1:3 depending on the box height.

### **Fully safe stackability:**

thanks to the specifically designed feet and skids, which allow the container to be stuck both when open and with folded sides, guaranteeing maximum stability during movement and stacking.

### **Greater capacity.**

From 5% to 12% more volume.

### **No sharp edges.**

Closed and perforated walls with smooth surfaces, specifically shaped and designed to protect the goods and the content. Easy to clean high water drainage to provide high hygiene and cleanliness.

### **Incredible strength.**

Structure and skids ensure strength and stability. The base with two or three skids provides the structure with further robustness and stability, thus allowing handling either with forklifts and pallet transporters.

### **Incredible simplicity.**

Safe and easy handling during opening and closing operations improves the working condition.

### **Fully recyclable.**

The container, produced in high density polyethylene (PE-HD), has no metal inserts at all and is 100% recyclable.

If broken each component can be easily replaced, without any special tools, by a full set of spare parts.

### **The widest range of accessories and standard sizes for the greatest versatility.**

Four basic standard sizes, available in two heights combined with a wide range of accessories, offer a brilliant answer to all market needs.

Industry

## Industrial box

*Suitable also for containing liquids, from production departments to containers, this box is the most used in a wide spectrum of industrial applications.*

This carrying and storage unit can be adapted to the widest range of industrial uses. Its dimensions are such as to optimise use of the space available in trucks, containers and warehouses and as a service container in production departments.

It is a container suitable for liquids and is resistant to both diluted and concentrated acid and alkaline solutions. Non-toxic for food industry use, it is especially suitable for refrigeration applications thanks to its resistance to cold and high carrying capacity (unit of mass = tons/square metre).

The double-sided structure, with corner and center-side columns, and the conformation of the bottom, featuring reinforcement ribs, guarantee greater resistance to compression load. This makes the container suitable for use with heavy loads during transport and storage of bulk and packaged products, or liquids.

Material: high density polyethylene (PE-HD).  
Excellent resistance to shocks, stacking, temperature extremes, ultraviolet rays.  
Non-toxic for food industry use.  
Suitable for handling with fork lifts, lifting trucks and all types of tipping devices.  
May be customised with the customer's impression or logo.

\* Dimension tolerance  $\pm 7$  mm - Weight tolerance  $\pm 3\%$   
\*\* Tests performed in laboratory at a temperature of 23°C, on models with 3 skids.

It is advisable to consult the [www.capp-plast.com](http://www.capp-plast.com) web site for **indications about safe use and handling of the Capp Plast containers**. Compliance with these rules makes the Capp Plast containers suitable for rational, safe use and, consequently, ensures their longer life.

Versions 1091 C and 1093 C offer space-saving in transport and storage, since 3 empty containers stack in the volume normally required for 2.

Industry

## Industrial box Gran Volume

*Conceived for storage of bulky products, offers improved exploitation of the available space.*

The versatile solution to problems of organization and rationalization of internal/external transport and storage of finished products, semi-finished products, components, spare parts, etc.

The "Gran Volume" series counts three versions in three different heights for optimal exploitation of working and storage locations and maximum adaptability to the available space resources.

Advanced technology construction permits storing voluminous products, thanks to the convex structure of the sides which increases total container capacity; the reinforced bottom makes it suitable for even very high mass loads.

The model in the wide front flap version facilitates pick-up or introduction of components during manufacturing processes and can speed up storage loading operations or feeding to manufacturing machines on production lines. Aligned and stacked, they can replace traditional shelving. The box also doubles as a practical and functional display support for products offered for sale in the large-scale distribution centers.

Industry

## 1425 and 1400 A

*Versatile, easy to handle, light and non-deformable are the indefatigable collaborators for the medium and small industry.*

### 1425 A/B/C/F

Versatile, medium-capacity containers, easy to handle also manually. They represent a practical solution for delivering and picking up semi-finished products to and from outside contractors and for supplying production lines with components for assembly. Available with wheels and lid.

### 1425 I 1425 L

Stackable containers with perforated sides, ideal for shipping cut flowers in refrigerated trucks. Extremely light and non-deformable for easy handling, loading and unloading with no need of lift trucks.

### 1400 A

Thanks to its particular dimensions and its perforated sides and bottom, this box is widely used in the textile industry in the spinning, twisting, spooling, weaving, and dyeing phases of production. Two strong handles facilitate manual handling and stacking. Versions with wheels and covers available on request.

Industry

## Pallets

*Hygienic, solid, light and easy to handle,  
but most of all economical.*

They find application in myriad sectors of industry thanks to their solid construction, light weight, and ease of handling. They are ideal for food industry applications since they are hygienic, mold and damp-proof, and suitable for use in refrigerated storage areas. Easy to clean and maintenance-free.

Made of PE-HD.  
Durable and resistant to heavy loads.  
Non-toxic: suitable for food products.  
Unalterable by chemical and atmospheric agents.  
Resistant to temperature extremes. No weight loss or shrinkage.

Economic Advantage:  
faster amortization of the higher initial cost, since there are no maintenance or repair expenses. The plastic pallet does not depreciate in value.

Material: high density polyethylene (PE-HD).  
Excellent resistance to shocks, stacking, temperature extremes, ultraviolet rays.  
Non-toxic for food industry use.  
Suitable for handling with fork lifts, lifting trucks and all types of tipping devices.  
May be customised with the customer's impression or logo.

Available on request subject to minimum order quantity of 2000 pieces.

Dimensional tolerances  $\pm 10$  mm  
Tolerance on weight  $\pm 2\%$

\* Only on two supports without section breaker:  
please always apply to Capp-Plast for information.

Tests were run at a temperature of 23° C  
and the boxes were not exposed  
to direct sun rays.  
Weights, characteristics and dimensions  
can be changed without previous notice.  
These data invalidate and supersede  
the previous ones.

It is advisable to consult the [www.capp-plast.com](http://www.capp-plast.com)  
web site for **indications about safe use  
and handling of the Capp Plast containers.**  
Compliance with these rules makes the Capp Plast  
containers suitable for rational, safe use  
and, consequently, ensures their longer life.

Agriculture

## Agribox

*Light and strong, is suitable for use in the main phases of mechanised agriculture: harvesting, transport, storage and refrigerated storage.*

This container meets the needs of industrialized agriculture for harvesting, transport, and storage operations (since it is easy to handle with lifting trucks, forklifts, and tipping devices) and for refrigerated storage applications thanks to its high carrying capacity (unit of mass = tons/square meter).

Strength and elasticity in the load bearing structure guarantee high resistance to stacking and considerable capacity to absorb shocks.

The sides and bottom are perforated for best aeration to ensure the long life of the contents. Versions 1091 F and 1093 F offer space-saving in transport and storage, since 3 empty containers stack in the volume normally required for 2.

Agriculture

## Agribox Gran Volume

*Strong and elastic. It guarantees increased operational economy thanks to improved space exploitation.*

A versatile solution to organizational problems in refrigerated warehouses that can also increase operational economy in the harvesting, transport, and storage phases of fruit and vegetable production. The "Gran Volume" series, with convex sides that increase capacity, counts three base sizes with different side heights to permit optimal exploitation of both floor and vertical space.

The monobloc load-bearing structure incorporating advanced technology, the boxed corner and center columns, and the honeycomb bottom guarantee maximum strength and elasticity for high resistance to stacking pressure.

Versions 1076 F and 1085 F, 1176 F and 1185 F offer space-saving in transport and storage, since 3 empty containers stack in the volume normally required for 2.

Standard: space for bar code application.

All accessories, except for the lid, must be ordered at the same time as the containers.

☐ = on request

Agriculture

## Enobox

*Light and easy to handle, it functionalises the use of labour in the vineyard and reduces the risk of oxidation.*

Can be handled in the vineyard with a simple hydraulic lift device mounted on tractors, or in collection centers and wine cellars with a lift truck, for savings on labor with respect to traditional systems.

Compared to bulk harvesting systems, its perforated side notably reduce the risk of oxidation and volatile acidity.

Solid bottom to avoid dispersion of the must. Profiled feet for easy stacking. Can be used for storing bottles in the upright and horizontal positions. Dimensional and weight stability.

Material: high density polyethylene (PE-HD).  
Excellent resistance to shocks, stacking, temperature extremes, ultraviolet rays.  
Non-toxic for food industry use.  
Suitable for handling with fork lifts, lifting trucks and all types of tipping devices.  
May be customised with the customer's impression or logo.

All Enobox versions, except for 1096 P, are manufactured on request, minimum order quantity 500 pieces.

\* Dimension tolerance  $\pm 7$  mm - Weight tolerance  $\pm 3\%$   
\*\* Tests performed in laboratory at a temperature of 23°C, on models with 3 skids.

It is advisable to consult the [www.capp-plast.com](http://www.capp-plast.com) web site for **indications about safe use and handling of the Capp Plast containers**. Compliance with these rules makes the Capp Plast containers suitable for rational, safe use and, consequently, ensures their longer life.

Versions 1091 P and 1093 P offer space-saving in transport and storage, since 3 empty containers stack in the volume normally required for 2.
