

Airless Shuttle

PCR refillable cartridges of personalized beauty experience.

エアレスシャトル

多體式真空瓶

SR Packaging optimizes the single-purpose PCR Airless Bottle to the latest all-in-one Airless Shuttle. It is a refillable solution that helps users to easier organize their daily usage of personal care items.

Airless Shuttle has three recyclable airless cartridges fixated within a reusable dispensing system. This innovation by SR Packaging provides consumers with personalized user experience for the freshly made products. Even better, when products run out, the cartridge is refillable.

PCR Airless Bottle has 70% post-consumer recycled resin (PCR PE) and is an airless bag-in-bottle design that reduces 70% of plastic compared to a syringe-type airless bottle. Its 100% vacuum-sealed EVOH+PP inner pouch is highly compatible with any skincare or SPF formulae. It is also known as excellent protection for preservative-free products.

Combined with SRP's exclusive airless pump that offers a precise dosage of 0.2 ml, users can dispense products with ease, even upside-down.

3-in-1 Airless Shuttle

✓ Refillable

✓ Post-consumer recycled

3-in-1 Airless Shuttle ref. CCA-060

Cap & Base: PETG Collar: Aluminium
