**Sugarcane Tube**: the packaging made of the viable plant-based Polyethylene

www.srpackaging.com
Sugarcane Tube

The packaging made of the viable plant-based Polyethylene.

Extracting ethanol from sugarcane creates a viable plant-based polythene product and is suitable for the recycling mix, as well as for subsequent reuse.

Fossil fuel is a limited and invaluable natural resource, and will eventually come to an end. Hence, more and more renewable replacements are made available. For packaging production, Sugarcane-based PE is one of a credited substitution.

Made from the byproduct of sugarcane, Sugarcane-based Polyethylene (PE) is a bio-based polymer. It is the renewable source alternative to the valuable oil-based polymer.
Benefits of opting packaging made of plant-based Polyethylene

✓ Plant-based plastic made from the byproduct of sugarcane
✓ Renewable resource, not from invaluable fossil fuels
✓ Recyclable for the post-consumer recycling process
✓ Retains the same properties of traditional oil-based polymers
