

Perfect for cleansing oil dispensing.

Easy-Press PUMP

The latest **Easy-Press Pump**, developed by SR Packaging, has a peculiar look. The purpose is to improve the pump pressing and provide a better user experience.

It has a cap atop the actuator to produce a sliding movement and smoothen each press. This simple "extra" provides an unusual engagement and solves problems for skincare and makeup users to use single-handedly with their preferred oil-type products.

Effortless, gentle press

It requires merely a light pressing down with the cap that works as a lever that pushes and slides, producing a smooth movement to force the actuator to pump liquid out.

Easy-to-control flow

While pressing down, users are able to stop at any point to control the flow of liquids drop by drop.

Clip

Locks actuator during transit. Users need to remove this clip before usage.

Actuator

It is the back-suction pump mechanism that omits dripping and offers excellent flow control.

Cap

Sits atop the actuator to smoothen movement and generates an effortless, gentle press.

Back-suction, no dripping

SR Packaging also incorporates its patented back-suction pump mechanism for the Easy-Press Pump. It ensures no residue on the tip, omit dripping onto the bottle, even for cleansing oils of the lightest texture.

Matching with varieties of PP, PE, and PET bottles (neck size 24/410) on [SR Packaging Catalog](#), **Easy-Press Pump** works well with lotions, gel, light liquids like makeup removers, and cleansing oils.

24/410 Easy-Press Pump

Ref. SMP-D050-24C1FL / Output 0.45 ml
