Danny Boy

The new generation wide mouth closures

Danny Boy

The new generation wide mouth closures

Capitalising on competences Plasticum has developed a wide mouth screw closure, called Danny Boy, for glass jars. The lightweight polypropylene closure is manufactured in a BRC approved factory, making Danny Boy perfectly suitable for Food applications such as peanut butter, marmalade and honey.

Design

Danny Boy has an outer diameter of 68 mm and fits on glass jars with a neck size of 66 mm. The top surface is gloss and the rim offers the required stiffness. The side is ribbed for a good grip while opening and closing. The closure will not deform or warp after production. Tests have proven that Danny Boy runs smoothly on standard high speed capping lines.

Tamper Evident

After moulding, a wad – consisting of a carton and thin metal layer – is mounted into the closure automatically. During capping the metal layer is sealed onto the glass jar while the carton layer remains in the inner side of the closure. This metal layer provides the required tamper evident function. After removal of the metal layer the carton closes off the jar during storage.

Economical & Ecological

Danny Boy is extremely light. It is not only the reduction of raw material, but also the reduction of energy consumption during production and transportation, making this closure economically attractive whilst preserving the environment.

Clean Production Environment

Danny Boy is produced in a BRC approved factory, meeting the most stringent quality regulations. Plasticum has appropriate systems and controls in place to ensure the hygiene of the production environment, products, processes and personnel.

Unique Benefits

- Cost-effective
- Lightweight
- Excellent fitting
- Tamper evident
- Runs on standard high-speed capping lines
- Environmentally friendly
- Recyclable

Specifications

- Outside dimension: 68 mm
- Neck size: 66 mm
- Screw application, 4 start thread
- Material PP
- High gloss top surface
- Ribbed side
- Mounted wad
- Suitable for Food applications
