Sunshine

The cap to make your future brighter

Sunshine

The cap to make your future brighter

Plasticum recognises the market need for high quality, cost-efficient and eco-friendly products. Therefore Plasticum developed Sunshine, a lightweight 65 mm over cap for aerosols. The cap has been developed in conjunction with partners in the industry to set a new market standard for the next decade, without changing product dimensions. Although it looks the same as other 65 mm caps, this version is unique in the market and distinguishes itself from the competition.

Layer-Packing

Sunshine is automatically layer-packed by a robot, which leads to a higher packaging density. An incredible increase of more than 25% can be packed in one box, on a pallet and in a lorry.

Cost Leadership

The objective was highly focussed on efficiency improvement and lower integral costs. Layer-packing provides all kinds of logistical improvements and significant savings in operational handling at customers.

Impeccable Quality

By selecting a special raw material, mechanical properties are maintained. An extra advantage of this material is the dimensional stability of the moulded caps thanks to the controlled shrink rate for different colours.

Superior Processing

Thanks to the solid layers and firm stacking, the caps remain perfectly round shaped, resulting into substantial efficiency improvements on the customer's high-speed filling lines.

Sustainable

The material saving as well as the efficiency improvement and logistical benefits give a considerable reduction of the carbon footprint.

Plasticum can state that Sunshine indeed makes the future brighter!

Unique Benefits

- Packed quantity increases more than 25%
- Low integral costs
- Logistic improvements
- Savings in operational handling
- Impeccable quality
- Excellent functionality
- Efficient processing
- Lower carbon footprint

Specifications

- Diameter 65 mm
- Height 50 mm
- Fits on necked-in tin plate cans
- Designed for all common valve dimensions
- Gloss surface finish
- Appropriate for translucent and solid colours
- Suitable for several product applications and market segments
- Material PP
