**YOUR PERSONAL CONTACT**

### **Fastest growing PET packaging**

We would like to thank you for taking the time to study our catalogue. We hope to give you a clear overview of the incredible possibilities of our PET Packaging. This catalogue shows you what we have to offer on standard families of PET bottles and jars including matching closures. Our assortment of PET Packaging is the fastest growing in the industry which we can deliver from stock! Besides our standard packaging we are specialised in creating custom designs using our 3D design capabilities. Enjoy our catalogue and feel free to contact us for more information.

### **Advantages of PET**

The Food-, Personal Care-, Cosmetic-, Household Chemicals- and Pharmaceutical market are rapidly discovering the advantages of PET (Poly-Ethylene-Terephthalate) making it the fastest growing packaging material in the industry.

- 1 Crystal Clear:** PET is one of the few plastics which can be crystal clear with a true sparkle giving it the same luxury appeal as glass (without the disadvantages of glass!).
- 2 Lightweight:** PET packaging can be extremely lightweight, often less than 10% of the (original) weight of a similar packaging in glass. These savings in weight directly result in a substantial reduction of the transport costs as well as offering more convenience to the consumer.
- 3 Shatterproof:** Packaging produced from PET are basically unbreakable, making it the preferred material for fillers and end-users and suitable to be used in all kind of environments like at home, on the shelves of the supermarket and at professional environments like hospitals, laboratories, offices etc.
- 4 Recyclable:** PET can be perfectly recycled, even as far back as complete cradle-to-cradle recycling. Used PET packaging is more and more collected now-a-days and re-worked back into a (food approved) granulate, called rPET (recycle PET), which can be used for making nice packaging again.

**5 Barrier Properties:** Out of today's most commonly used plastics is PET one of the best performing materials when looking at barrier properties and chemical resistant.

### **Pharma Specialist**

It is our objective to meet, but even more so to surpass the requirements of our customers. Therefore we are ISO 9001:2008 certified by Lloyds to guarantee you the highest possible service. All our pharmaceutical packaging are produced in our new clean room (ISO 15378 certified - Class D in operation), creating a very clean environment where we carefully produce your pharma packaging. Inside our clean room the products are automatically packed into double-sealed PE brick-packs giving you the guarantee that they have not been touched by human hands. The products are not exposed to open air nor are they at any time in direct contact with cardboard.

### **Custom PET packaging**

Besides offering a wide range of standard packaging of which we keep stock, we are even more so the specialist for developing custom PET products. By using the most advanced 3D design software we design and analyze new custom shapes and with our 3D stereo lithographic printer we are able to present you a 3D mock-up within 24 hours. All design data is digitally and interactively exchanged with our dedicated mould makers making sure no information gets lost. This way we can guarantee you very low mould costs and a short lead time giving you the best opportunity to distinguish yourself from the competition!

### **Mission**

Your packaging, our mission. Packaging should not be your worry, as we provide you with excellent quality, in time delivery and fair pricing, giving you the time to focus on your own mission!!
