

# APERTURE<sup>®</sup>

IRREMOVABLE CLOSURE INNOVATIONS

The Aperture cap closure works in a very different way to current cap designs:

“it’s irremovable”

The significance of Aperture Cap closure is that once fastened to a container, Aperture Cap cannot be re-opened, detached or removed unlike all other known cap closures.

- CANNOT BE REOPENED, DETACHED OR REMOVED
- COLOUR CODED DESIGN
- PRE USE TRANSPORTATION SEAL
- PREVENTS MISUSE-PILFERAGE-CONTAMINATION- WASTE
- SINGLE COMPONENT
- MULTIPLE SIZE CONFIGURATIONS
- ENHANCES CONTAINER CONTENT VALIDITY
- INFINITE USES

## Aperture Closure System

Aperture Irremovable Container Cap Closure only allows the extraction of liquids/condiments from a container/drum/bottle by way of dispensation. Aperture prevents the user from accessing the liquids from the container other than the means of inserting a tube from a dispensing or syphon device through Aperture.
