

About us

 cups4you

Packaging Excellence

Cups4you B.V. (founded in 1969) develops and produces injection-moulded packaging for the Food and Beverage Industry. The product range consists of a wide range of standard, special and customised products with a content of 100ml to 2500ml.

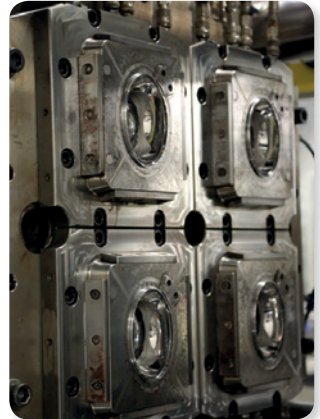

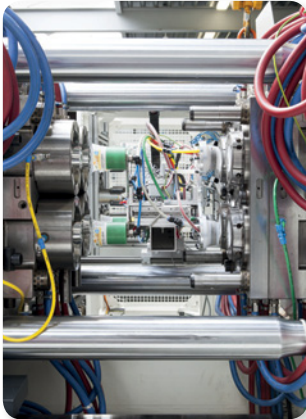

Already from the early 1990's Cups4you is an absolute specialist in manufacturing rigid plastic packaging in combination with In Mould Labelling (IML).

Packaging Excellence

At Cups4you we strive to offer our clients the best balance between flexibility, quality, service, innovation and price. In this, we aim to be the best supplier of thin walled injection moulded food packaging of Europe.

Key figures

- Privately held company.
- Nearly 70 employees.
- 49 injection moulding machines with In-Mould Labelling capability.
- Production 24 hours/day, 5 days a week. In peak season 24/7.
- Approximately 150 moulds standard available.
- Output: over 3,000,000 products/day.
- 17,650m² Production and Warehouse facility in Oss, The Netherlands.
- BRC/IoP grade A certified.

SC-Series

Standard round cups.

Easy to fill, handle and use.

Product cases

A preview to the
Packaging Excellence of Cups4you!

 cups4you

Packaging Excellence

Cucina Pronto Casa salad dressing

The homemade Italian 'Mamma Maria' mustard dressing by Cucina Pronto Casa looks extra tasty in the 250 ml cup (CC86-250). The flat sides of the cup make the packaging user-friendlier and, therefore, the top-quality dressing even easier to pour.

Berentzen Party tub with 24 liqueurs

Cups4you produces a 1530 ml cup (SC133-1530) with an in-mould label for the German liqueur company Berentzen. The tub, which has a tamper-evident seal, contains 24 unbreakable lightweight 0.02l PET bottles that hold different types of liqueur.

Katjes 'Lecker to Go' sweet packaging

Designed especially for Katjes (OSE95-335), this cup is a fine example of customised packaging. The oval shape makes the sweet pot easy to hold and ideal for on the go. A transparent in-mould label has been chosen to make the product visible.

In Mould labelling

Discover the advantages
of In Mould labelling.

 cups4you

Packaging Excellence

In Mould labelling

In Mould labelling (IML) is used to give packaging and label a professional, unified appearance. This will make your product even more prominent on the shelves and thus also to consumers. IML is a method that involves the attachment of pre-printed plastic labels to an end product in a mould during the injection-moulding process. The printed label is electrostatically 'charged', which enables it to position itself against the inner wall of the mould automatically. When the mould is filled with melted plastic, the label literally melts together with the packaging material to form the end product (packaging).

Advantages of IML applications:

optimum print quality

8 offset print colours in higher resolution and any desired shape.

environmental packaging

Packaging and label are made from polypropylene (PP) and therefore fully recyclable.

odd shapes

Can be applied to odd-shaped packaging (offset print has limitations).

strong and hygienic

Seamless scratch and moisture-resistant solution.

boundless decoration possibilities

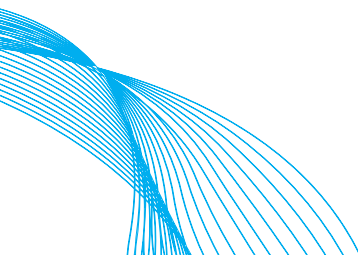

Choose the material and finish to match your product.

versatile as regards design changes

Change of label in the same process.

efficient on filling lines

Eliminate label application on your filling line.

Culidish

*The most ideal temperature for accurate cooking.
Excellent flavour and quality of a fresh meal.*

The best dish is a Culidish®

Culidish comprises different compartments in a single meal tray that has a patented heat distribution label (shielding). This makes it possible to heat the entire meal in one microwave session and for the different meal components to reach the most ideal temperature for accurate cooking. As such, the flavour and quality of the fresh meal remain optimal!

The Shieltronics label ensures the right temperature by adjusting the strength of the microwaves to each meal compartment. This means, for example, that soup, vegetables, fish, sauce and even salads or ice cream can be placed in the microwave together, without the risk of hot/cold spots or burn-in.

Advantages of Culidish

- Ease: prepare fresh meals perfectly in one go.
- Quality: ideal temperature for every meal component.
- Taste: optimal preservation of fresh product taste.
- Versatile: endless culinary possibilities in different sectors.
- Longer best-before date: no fewer than 10 days!
- Savings: the long best-before date eliminates waste (for example, in the hotel sector).

Culidish leads to better service and turnover in the following sectors:

- Hotels and restaurants.
- Specialist caterers.
- Meal preparation retail companies.
- Exclusive meal concepts in supermarket channels.
- Caterers and fast-food chains.
- Health care sector.
- Menu delivery companies.
