

We took the industrial one-gallon and one-upped it.

You probably haven't thought too much about what goes into designing and making an industrial gallon container. However, at Altium, our team of designers and engineers have meticulously analyzed every detail to ensure that our new Dura-Lite® IRG bottle is a no brainer for the household and industrial chemical, automotive, food, cooking oils, and beverage industries.

The Dura-Lite® IRG Design: Better performance, more environmentally friendly.

Believe it or not, it's possible to make a one-gallon feel lighter than one-gallon, but with improved performance.

What the Dura-Lite® IRG Design means for you:

- Made with ~20% less plastic – meaning less impact on the environment
- Increased top load performance by ~7% (varies by starting gram weight)
- Textured flow through improves grip, minimizes glugging
- Fits existing fill lines. No need for expensive modifications
- Bumper design protects labels and preserves brand visibility
- Little to no extra resources needed to implement the switch

Learn more about Altium's packaging solutions

- Over 100 years of experience
- Best-in-class packaging options
- Innovative custom solutions
