

TRICORBRAUN®

QUALITY MANAGEMENT

A FOCUS ON QUALITY THAT IS SECOND TO NONE

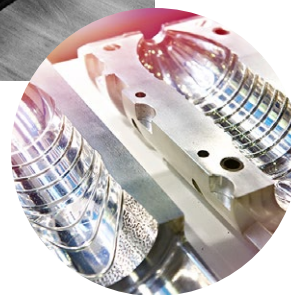

At TricorBraun, our focus on quality is second to none—and we continue to invest and grow in this area. We know our customers value quality, and we're committed to maintaining the highest standards so you can rely on us to consistently deliver quality products, quality service, and quality control support.

Our dedicated team of in-house quality professionals, packaging subject matter experts, and quality engineers has the technical, operations, and brand experience to support every aspect of the packaging process—from design and development to distribution and quality control. **Whatever your packaging needs—materials, stock, or custom—we have the team members and processes in place to ensure our customers receive quality packaging components.**

Looking for the best glass, plastic, aluminum, flexible, or bio-resin components for your

package? We have material expertise for that. **Looking for a custom**

packaging solution? We have in-house design, engineering, and validation experts to help ensure your mold is built to spec and that there are no unintended consequences with your custom packaging components. **We've even invested in our own in-house mold development shop,** a rarity among packaging distributors, which allows us to seamlessly control quality from start to finish.

Quality Every Step of Your Packaging Journey

STOCK PACKAGING

We provide quality control through continuous improvement programs, food safety certification assistance, supplier, end-user, and warehouse audits, and more—all backed by guidance and subject matter experts to serve customers and resolve problems quickly and effectively.

CUSTOM PACKAGING

Our award-winning Design & Engineering team provides the expertise to support the quality of your custom packaging—designing for manufacture from the technical specs to mold development to testing and validation for successful commercialization.

SUPPLY CHAIN EXPERTISE

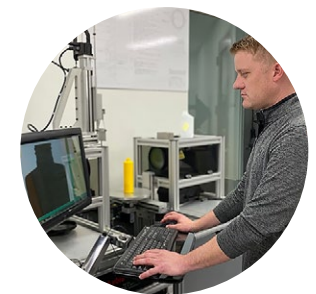

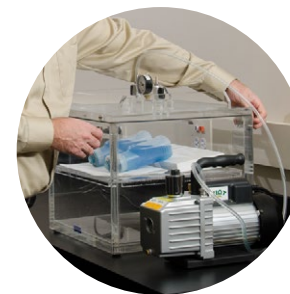

We have team members across the world monitoring quality across materials, molding processes, and decoration to and from the production floor to final delivery.

QUALITY CONTROL SUPPORT

Our dedicated in-house quality professionals monitor manufacturing specifications, verify standards, and troubleshoot problems at manufacturing facilities around the globe.

Investing in Our Team and Our Equipment

We are continuously investing not only in team members but also in quality equipment so that the stock and custom packaging components we source, design, and develop meet your brand requirements. Our equipment spans the range from video measuring systems to 3D scanners to vacuum and conditioning ovens. Our equipment allows our quality team to take your package through a wide range of qualification and functional testing, including statistical dimension analysis, theoretical component compatibility, mold qualification, environmental stress cracking resistance, heat induction seal testing, leak testing, drop testing, and more. Our team also keeps up to date as the requirements placed on packaging evolve, including Amazon pre-testing and other imperatives of the e-commerce age.

Our quality expertise, equipment, and capabilities support your packaging solution through its lifecycle—from manufacturing and filling, through distribution, directly into consumers' hands, and through product consumption.

Quality Across Our Global Supply Chain

TricorBraun has team members on the ground all over the world to support you when working with our domestic and international vendors and manufacturing partners. **Our expertise enables us to help our customers define, measure, and execute the quality requirements for their packaging.** Our data-driven approach and dedicated customer service enable us to collaborate with customers and suppliers alike. Plus, wherever you or your business is located—from North America to Europe to Asia to Australia—our global team can troubleshoot and prevent problems or arrive at your facility to identify opportunities to increase manufacturing productivity.

A Proactive Approach You Can Count On

At TricorBraun, our dedication to quality is unmatched. Between our vast resources and our focused team, we help our customers to achieve their packaging goals. We do this by looking proactively at how we can prevent issues from arising and problem-solving challenges where needed. Plus, we actively monitor consumer, category, and market trends to anticipate how changes in consumption and logistics will impact packaging decisions. For example, we invested in a vibration table to provide a broad range of testing equipment needed for the growing e-commerce marketplace. **Because when your packaging achieves the highest quality standards from start to finish, it means you win—and we win too.**

Wherever you are in your packaging journey, we're here to help.
