

Stiplastics offers a wide range of dosing spoons and turnkey solutions, including cylindrical, oval and even double-dose spoons, as well as specific developments with graduations and capacities to meet particular needs. One of its flagship products is the Spoonbox® spoon, which is perfectly designed for taking liquid medicines and microgranules. This represents a real alternative to the pipette from an economic, hygienic and ergonomic point of view. The range now features two models to respond to different dosing requirements.

The Spoonbox® spoon offers multiple advantages

For laboratories:

- Accurate dosing of liquids, granules, microgranules, etc.
- Particularly suitable for paediatric use
- Ergonomic container and handle combined: easy to hold
- Pad printing for customised markings, logo etc.
- Class 1, CE mark medical device
- 2 models available: capacity 9ml and 13 ml

For users:

- Simple to fill and use: easy-to-read scale thanks to a clear contrast between the product being taken and the markings on the spoon
- Easy to clean
- Ergonomic: easy to hold and particularly suitable for children
