The new "single mould" system

Our new BRUSH is fully manufactured in a single piece.

- The absence of the metal clip as in the other designs prevents the contents of the bottle (medicine or medical device) from being contaminated by the metal
- Our brush is made in a single piece and is molded in an ISO 7 clean room which is (not feasible with the current technologies)
- Our BRUSH is a low-cost and recyclable product as it is made in PP material (approved for medical use)
- Our BRUSH filaments could be manufactured and placed in various geometries (besides the traditional round and linear)
- Our cap is fastened onto the neck of the bottle due to our patented system which prevents it from "adhering" to the bottle, to avoid the possible detachment from the brush

BP-B 38	38mm	11mm
	1.496 inch	0.433 inch

Sizes of Brush filaments geometries

Fields of application

Our new BRUSH can be used for different applications:

MEDICAL-PHARMACEUTICAL USE:

- for nail mycosis treatments
- for hands and feet (calluses and corn treatments)
- to treat and reinforce the nails of the hands and feet

COSMETIC USE:

- for the application of nail polish
- for nail care and protection

Our BRUSH is a product designed to prevent your product from being contaminated

Our brush is manufactured in a "single piece", a process which allows the moulding in a controlled environment "ISO 7 clean room", resulting in a product suitable for pharmaceutical-medical uses.

The current production technologies do not involve a controlled manufacturing environment and for this reason our brush is an exclusive and unique product.
